## FOAMMASTER

### FM 9766

- FoamMaster power cleaning systems automatically dilute concentrated cleaning products with water & use compressed air to generate a thick, rich, clinging foam.
- Foam cleaning produces the most effective and efficient results by allowing the cleaning solution to remain in contact with the soil load for an extended time period. It also allows you to clean hard-to-reach areas not always accessible by standard cleaning methods. The deployment of low pressure foam helps prevent damage to walls and equipment.
- FoamMaster power cleaning systems can be customized to meet your company's specific business strategies. The system can be used with limited water flow and compressed air pressure of 40 psi (3 bar or 3 kg).
- 25ft. Discharge hose & brass nozzle included.
- Ancillary products can further enhance the performance of your FoamMaster.
